

# Wireframe

- Correct letter + position are displayed here.
- have input box to type in guesses.
  - have button that will take value you can compare to other values; button is also associated by function that
- crosses out letter in letter bank
  - if it matches a value in the "correct answer box", display that letter in the correct position in the box.
  - if not, display the incorrect letter in the "incorrect answer box"; also we need to change the main image, we need to cross out letter in answer bank in both.
